

Energy Policy

Men-Chuen Fibre Industry Co., Ltd. is a professional manufacturer specialized in the knitting, dyeing, finishing processing, and R&D of special functional fabrics. Our products are supplied to major world-renowned professional sports brands. Headquartered in Neihu District of Taipei City, the Company also owns the specific production complex in charge of knitting, dyeing, and finishing and logistics in Taoyuan City. We commit to complying with regulatory requirements and continuously improving energy-related operational activities based on the philosophy of energy saving and carbon reduction. We promise to achieve the following:

1. Uphold the protection of the natural environment and resources as our appeal; prioritize energy-saving and eco-friendly products and solutions during procurement and facility design; select equipment with lower energy consumption and better energy efficiency ratings, giving priority to energy efficiency while balancing costs.
2. Implement lean management within the production process; continuously optimize equipment and operational workflows to maximize energy performance and reduce energy consumption, thereby lowering operational energy expenditures and achieving the goals of corporate sustainable development.
3. Comply with local energy-related rules and regulations; consider the needs and expectations of internal and external stakeholders; implement energy management and review assessments; periodically identify relevant rules and requirement items; plan sustainable development blueprints and roadmaps in accordance with policy trends; establish goals and dedicate efforts to improving energy use efficiency.
4. Promote a 'people-oriented management approach'; strengthen consultation and participation with employees and their representatives, as well as interactive communication with stakeholders; enhance awareness of personal responsibility through education, training, and competence upgrades; foster a culture that supports the energy management system, establish a shared vision for energy management, and achieve concrete results in energy saving and carbon reduction.
5. Implement PDCA management principles; execute and maintain an effective energy management system; periodically review and adjust operations; and continuously improve to elevate energy performance, gradually achieving the sustainable business objectives pursued by the enterprise.

Energy Policy

Scope of Application of the Energy Policy

Headquarters: 10F., No. 392, Sec. 1, Neihu Rd., Neihu Dist., Taipei City

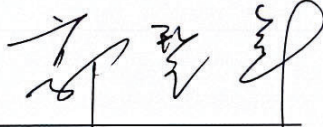

Guishan Plant: No. 8, Dacheng Rd., Dalin Vil., Taoyuan Dist., Taoyuan City
